Hi Priya,

Marco from your account team passed along your contact. We are kicking off a project to stand up an OpenShift Container Platform cluster for our internal developer organization, and our leadership wants Red Hat Consulting involved end to end.

Quick sketch of where we are: roughly 60 application developers across five product teams, mostly Java/Spring with a small but growing Python footprint, currently deploying to a tired Kubernetes cluster a contractor set up two years ago. We want OpenShift partly for the platform and partly for the support model.

Could we get something on the calendar for a discovery call in the next two weeks? I'd like to walk you through our environment and get a sense of how you'd structure the engagement.

Raj Patel
