Priya,

Friday Apr 10 at 10:30 ET works. I'll send the calendar invite this morning.

Attaching (well, I'll send separately because Outlook is being Outlook) a one-pager on the current state. Short version: three control plane / twelve worker bare-metal cluster, vSphere alongside, Ceph for block, NGINX ingress, and a homegrown promotion pipeline that nobody on the current team built. The pipeline is the part that worries me the most.

On outcomes — I'd say (1) developers self-service their own namespaces without filing tickets, (2) we have a defensible day-2 operations story that doesn't depend on one heroic SRE, and (3) we are confident enough in the platform to retire the old cluster by end of Q3.
