

Recap — Apr 10 discovery call

From: Raj Patel <raj.patel@hartwell.com>
To: Priya Venkatesh <priya.venkatesh@redhat.com>
Date: Fri, Apr 10, 2026, 12:18 PM EDT

Priya,

Good call. A few notes I want to confirm before I take this back to Elena (CTO) on Monday:

- You're going to send a draft statement of work next week with a two-week installation window plus a four-week stabilization period.
- Day-2 ops will be split: Red Hat owns it for the first 30 days post go-live, then we run it with weekly check-ins for another 60.
- Training for our developers is scoped separately — I'd like to discuss that more, see below.
- The hard constraint is end of Q2 for production cutover. Everything else flexes around that.

On training: my team has heard 'OpenShift is just Kubernetes with extra steps,' which is unhelpful. I want them to actually understand the platform — Operators, Routes, BuildConfigs, the security model. Can you put a real proposal in front of me, not just a pointer to the Red Hat training catalog?
