Agenda is good. One ask: could you send a pre-read package by end of this week? I'd like the team to walk in with context, not learn the vocabulary in real time. Specifically anything you have on:

- How developers build and push container images on OpenShift (BuildConfigs vs. external CI, Source-to-Image, etc.)
- The day-2 ops model you're proposing
- What 'self-service namespaces' actually looks like in practice

Even a links list is fine. I trust them to read.
