Date: Thu, Apr 23, 2026, 4:40 PM EDT

Curated rather than firehosed. Five items, in order of priority:

1. *OpenShift Container Platform Architecture Overview* (internal whitepaper, attached) — 12 pages, 25-minute read.
2. *Developer experience on OpenShift: BuildConfigs, S2I, and external CI* — short blog post on docs.openshift.com.
3. *Day-2 operations reference architecture* — focused on the ACM + ArgoCD pattern we're proposing.
4. *Multitenancy and namespace self-service* — a 9-minute explainer video; this is the right primer for the 'developers stop filing tickets' conversation.
5. *EX180 and EX288 certification overview* — for anyone curious about the cert path.

Links coming in a follow-up from David, who manages our customer portal materials.
